Problem Statement:

Farm-Scheme is a project in the agriculture domain. It is a .NET Web-based application which gives an idea to the farmers how to use e-farming to sell their products. Farmers will get new ideas to improve their productivity; they can buy and sell their products online from different cities through the process of bidding. Farmers can use this facility and avail themselves of the benefits of different schemes available which will increase their profit.

Schemes for Farmer

The Government of India provides various schemes for farmers, but due to lack of awareness and miscommunication, farmers do not avail these benefits. Hence, we try to integrate some of the schemes like Fasal Bima Yojna and Bidding of Crops scheme. We are implementing an automated system that helps reduce the burden on farmers and the system.

Fasal Bima Yojna-

To provide insurance coverage and financial support to the farmers in the event of failure of any of the notified crops because of natural calamities, pests & diseases. There will be a uniform premium of only 2% to be paid by farmers for all Kharif crops and 1.5% for all Rabi crops. In the case of annual commercial and horticultural crops, the premium to be paid by farmers will be only 5%. The premium rates to be paid by farmers are very low and balance premium will be paid by the Government to provide a fully insured amount to the farmers against crop loss on account of natural calamities.

We are providing an online means to apply for and claim insurance which will help the system to work efficiently and enhance smooth handling of records. The bidding module will enable the farmer to place crops for auction and receive the best price, which stabilizes the farmer's income and eliminates the stress of physical sale of crops in the market.

Project Abstract:

To encourage farmers to adopt innovative and modern agricultural practices.

To ensure flow of credit to the agriculture sector.

Mandatory Modules:

Users:

There are three types of users in the system:

- Admin
- Farmer
- Bidder

Module 4: Bidding

This module will focus on bidding for crops by bidders in different cities. Registered users will have access to the online marketplace where individuals can request their crops for auction and potential buyers can make bids. A seller will request for a crop auction, specifying details of the crops including quantity. A seller can see current bids and logs of all crops sold. The Bidder will specify the amount they plan to invest for the bidding process and will be able to see the crop hosted for selling. This module allows the bidder to see the current bidding details on their screen and the system allows users to bid any crop by clicking on the bid button. Once the user bids for any crop the bidding details will be displayed to the user and data will be filled into the database.

Admin will control the entire bidding process, approve the crop to be sold and the final bid.

W3H

Modules:

Admin

Farmer

Bidder

What?	How?
What are the modules required?	1. Admin a) Admin can login to the dashboard

Admin module	Method 1: Admin can login using name and password.
Farmer module	Method 2: Admin can login using email id and password.
Bidder module	Method 3: Admin can login using social media platforms.
What are the functionalities required for admin module?	b) Admin can manage bidding
	Method 1: Admin manages bidding by selective tendering
Admin can login to the dashboard	Method 2: Admin manages bidding by open tendering
Admin can manage bidding	Method 3: Admin can manage bidding by negotiated tendering

Admin	can	
send notifications to bidding winners		
Admin	can	c) Admin can send notifications to bidding winners
generate bidding bill		
		Method 1: Admin sends notification to bidding winners via SMS.
What are the modules required for farmer module?		Method 2: Admin sends notification to bidding winners via email.
		Method 3: Admin sends notification to bidding winners via popup.
Farmer		
can list the new crop for auction		
Farmer		D)Admin can generate bidding bill
can view the list of my crops and their status		
		Method 1: Admin can generate manual billing.
Farmer		
can view real time bids based on crops		Method 2: Admin can generate automated billing triggered by auction end.

Farmer can delete crop details before bidding	Method 3: Semi- automated billing with admin approval.
Farmer can update the crop details before bidding	2)Farmer: -
Farmer can view the crops details using filter	A) Farmer can list the new crop for auction Method 1: View crops in a separate section.
Farmer can view the current highest bid	Method 2: View crop detailed view page.
	Method 3: View crop in a comparison view.
What are the functionalities of bidder module?	B) Farmer can view the list of my crops and their status Method 1: Mobile App with Notifications

Bidder can view list of available crops for auction		Method Portal Dashboard 2: Web
Bidder can place bid on a crop		Method Based Status Updates 3: SMS-

Method 1: Farmer
can filter by name

Method 2: Farmer
can filter by auction status

Method	3: Farmer
can filter by date listed	

Why?

Why not?

1. Admin a) Admin can login to the dashboard Method 2: Admin can login using email id and password. (Method 2 is the best because it ensures unique identification, supports secure authentication, and allows easy password recovery.) b) Admin can manage bidding	1. Admin a) Admin can login to the dashboard Method 1: Admin can login using name and password. Method 3: Admin can login using social media platforms. (Method 1 is not reliable due to non-unique usernames and higher risk of impersonation. Method 3 is less professional and depends on third-party services, which may not be secure for admin access.) b) Admin can manage bidding Method 2: Admin manages bidding by open tendering
--	--

Method 1: Admin manages bidding by selective tendering

(Method 1 is best because it allows the admin to invite trusted or pre-qualified bidders, ensuring quality and control.)

Method 3: Admin can manage bidding by negotiated tendering

(Method 2 is less secure as it allows anyone to bid, which may reduce quality or increase risk.

Method 3 lacks transparency and may lead to biased or unfair bidding outcomes.)

c) Admin can send notifications to bidding winners

Method 1: Admin sends notification to bidding winners via SMS.

Method 3: Admin sends notification to bidding winners via popup.

c) Admin can send notifications to bidding winners

Method 2: Admin sends notification to bidding winners via email.

(Method 2 (Email Notification) is best because it allows detailed communication, attachments (like invoices), and serves as a formal record.

(Method 1 (SMS Notification) is quick but limited in content and not ideal for detailed instructions.

Method 3 (Popup Notification) only works if the user is online and active, making it unreliable for important updates.)

D)Admin can generate bidding bill

Method 1: Admin can generate manual billing.

Method 3: Semi-automated billing with admin approval.

(Method 1 (Manual Billing) is time-consuming and prone to human error, especially with many transactions.

Method 3 (Semi-Automated Billing) adds unnecessary delay and still

D)Admin can generate bidding bill

Method 2: Admin can generate automated billing triggered by auction end.

(Method 2 (Automated Billing Triggered by Auction End) is best because it ensures fast, accurate, and scalable billing without manual effort.)

requires admin intervention, reducing efficiency.)

2)Farmer: -

A) Farmer can list the new crop for auction

Method 1: View crops in a separate section.

Method 3: View crop in a comparison view.

(Method 1 (Separate Section) may confuse users or require extra navigation.

Method 3 (Comparison View) is meant for evaluating crops, not for listing them.)

2)Farmer:

-

A) Farmer can list the new crop for auction

Method 2: View crop detailed view page.

(Method 2 (View Crop Detailed View Page) is best because it allows farmers to review and confirm all crop details before listing.)

B) Farmer can view the list of my crops and their status

Method 2: Web Portal Dashboard

Method 3: SMS-Based Status Updates

(Method 2 (Web Portal Dashboard) is less convenient for farmers without regular computer access. Method 3 (SMS-Based Updates) lacks detail and interactivity, making it harder to manage multiple crops.)

C) Farmer can view real time bids based on crops

		Method	2: SMS-Based Status Updates
		Method	3: Call based IVR system
B)	Farmer can view the list of my crops and their status	(Method	2 (SMS-Based Status Updates) is limited in detail and can't show live bidding activity.
	Method	1: Mobile App with Notifications	Method 3 (Call-Based IVR System) is slow and inefficient for tracking multiple or fast-paced bids.)
	(Method	1 (Mobile App with Notifications) is best because it provides real-time updates and an easy-to-use interface for tracking crop status.	
	)		
		D)	Farmer can delete crop details before bidding
		Method	2: SMS based deletion
		Method	3: Assisted via customer support
		(Method	2 (SMS-Based Deletion) is limited, error-prone, and lacks confirmation or detailed feedback.
C)	Farmer can view real time bids based on crops		

Method 1: Mobile App with Notifications (Method 1 (Mobile App with Notifications) is best because it provides real-time bid updates, interactive visuals, and instant alerts for each crop.) D) Farmer can delete crop details before bidding Method 1: Manual deletion (Method 1 (Manual Deletion) is best because it gives farmers full control to remove crop listings instantly through the app or portal.)	Method 3 (Assisted via Customer Support) is slow and not scalable for frequent or urgent deletions.) E) Farmer can update the crop details before bidding Method 2: SMS based updating Method 3: Assisted via customer support (Method 2 (SMS-Based Updating) is limited in functionality and prone to errors due to formatting issues. Method 3 (Assisted via Customer Support) is slower and not efficient for frequent or urgent updates)
--	--

E) Farmer can update the crop details before bidding

Method updating

1: Manual

(Method Updating) is best because it allows farmers to directly and accurately edit crop details through the app or portal before bidding starts.
.)

F) Farmer can view the crops details using filter

Method 2: Farmer can filter by auction status

Method 3: Farmer can filter by date listed

(Method 2 (Filter by Auction Status) is useful but secondary, mainly for tracking progress rather than identifying crops.
Method 3 (Filter by Date Listed) is less intuitive unless the farmer remembers exact listing dates.)

G) Farmer can view the current highest bid

Method 2: SMS based deletion

		Method	3: Assisted via customer support
		(Method	1 (Manual deletion) is useful but secondary, as it requires logging into the platform, which may not always be feasible in rural or low-connectivity areas.
F) Farmer can view the crops details using filter		Method	3 (Assisted via customer support) is less efficient unless the farmer needs help, as it involves waiting for assistance and may delay the deletion process.)
Method can filter by name	1: Farmer		
(Method	1 (Filter by Name)		is best because it allows farmers to quickly find specific crops they remember by name, saving time and effort.
)			
		3)	Bidder: -

		A) Bidder can view list of available crops for auction Method 1: View crops in a separate section. Method 3: View crop in a comparison view. (Method 1 (View crops in a separate section) is useful but secondary, as it offers a broad overview without in-depth details.
G) Farmer can view the current highest bid Method 1: Manual deletion (Method 2 (SMS based deletion) is best because it allows farmers to quickly delete listings remotely without needing internet access, making it highly convenient and accessible.)		Method 3 (View crop in a comparison view) is less effective unless the bidder is actively comparing multiple crops side by side, which may not be the primary need during initial browsing.)
		B) Bidder can place bid on a crop

Method
based deletion

2: SMS

Method
via customer support

3: Assisted

(Method based deletion) is unrelated in this context, as it pertains to removing listings rather than placing bids.

2 (SMS

Method via customer support) is less efficient unless the bidder faces technical issues, as it introduces delays and depends on external assistance.

3 (Assisted

)

C)
current highest bid

Bidder can view the

		Method based deletion	2: SMS
		Method via customer support	3: Assisted
3)	Bidder: -	(Method based deletion)	2 (SMS)
A)	Bidder can view list of available crops for auction	(Method based deletion) is unrelated in this context, as it pertains to removing listings and not viewing bid information.	
	Method detailed view page.	2: View crop	
		Method via customer support	3 (Assisted)
	(Method detailed view page) is best because it provides bidders with comprehensive information about each crop, helping them make informed bidding decisions.	is less practical unless there are technical issues, as it introduces delays and lacks the immediacy needed during active bidding.	
)		D)	Bidder could get notification of bidding status

		Method notification	2: SMS
		Method notification	3: Email
		(Method notification) is useful but secondary, as it may not be as immediate or interactive as push notifications, especially in areas with limited mobile signal.	
		Method notification) is less effective unless the bidder regularly checks their email, which may not be practical for time-sensitive bidding updates.	
B)	Bidder can place bid on a crop	)	
Method deletion	1: Manual		
(Method deletion) is best because it allows bidders to place bids directly through the platform interface, offering immediate	1 (Manual		
E)	Bidder can search crops by name		
Method	2: Farmer		
	can filter by auction status		

confirmation and control over the bidding process.

)

Method
can filter by date listed

3: Farmer

(Method 2 (Farmer can filter by auction status) is useful but secondary, as it helps in narrowing down crops based on their bidding phase but doesn't directly assist in finding a specific crop.

Method 3 (Farmer can filter by date listed) is less intuitive unless the bidder remembers the exact date a crop was listed, which is unlikely in most cases.

)

C) Bidder can view the current highest bid

Method 1: Manual deletion

(Method 1 (Manual deletion) is best interpreted here as manually checking the platform interface, which allows bidders to instantly view the current highest bid in real time, ensuring transparency and timely decision-making.

)

D) Bidder could get notification of bidding status

Method 1: Push notification

Method 1 (Push notification) is best because it delivers real-time updates directly to the bidder's device, ensuring they stay informed instantly about their bidding status without needing to check manually.

E) Bidder can search
crops by name

Method 1: Farmer
can filter by name

(Method 1 (Farmer
can filter by name) is best because it
allows bidders to
quickly search for specific crops
they are interested in, saving
time and improving the
efficiency of the bidding process.)

BACKLOG TASK & ID	STORY POINTS	ASSIGNED TO	STATUS	ORIGINAL ESTIMATE DAYS	SPRINT
As a seller I want to list my new crop for auction so that the bidders can bid for my products and buy them #1000	2				1
Design the UI for the auction listing page.	1	Narayan	Completed	1	
Implement the form for sellers to input crop details (e.g., name, base price, image)	1	Narayan	Completed	1	
Validate the input fields to ensure all necessary information is provided.	1	Narayan	Completed	1	
As a seller I want to view the list of my crops and thier status so that I can track their status #1001	2				1
Implement a table to display crop details (e.g., name, base price, image)	1	Jeevaanth	Completed	1	
Ensure the page is responsive and user-friendly.	1	Jeevaanth	Completed	1	
As a seller view real time bids based on crops so that I know the current highest bid for the crop #1002	2				1
Implement a component to show the current all bids for each crop.	1	Bhargava	Completed	1	
Ensure the display updates in real-time as new bids are placed.	1	Bhargava	Completed	1	
As a seller I want to delete/update crop details before bidding so that I can fix the mistake and make updates #1003	2				1
Implement form validation to ensure updates are correct.	1	Vignesh	Completed	1	
Add confirmation dialogues for delete actions.	1	Vignesh	Completed	1	
As a seller I want to filter the crops by name so that it is easy to view the required Crops #1004	3				1
Implement the filtering logic to search and display crops based on the input name.	2	Jeevaanth	Completed	1	
Ensure the filtering is efficient and responsive.	1	Jeevaanth	Completed	1	
As a bidder I want to view list of available crops for auction so that I can buy the required crops #1005	3				1
Implement a table to show crop details (e.g., name, base price, image).	2	Bhargava	Completed	1	
Ensure the page is responsive and user-friendly.	1	Bhargava	Completed	1	
As a bidder I want to place bid on a crop so that I can participate in the auction #1006	3				1
Implement the form for bidders to input their bid amount.	1	Narayan	Completed	1	
Validate the input fields to ensure the bid is valid.	2	Narayan	Completed	1	
As a bidder I want to view the current highest bid so that it is easy for placing the next bid on the crop #1007	3				1
Implement a component to show the highest bid dynamically.	2	Nithin	In Progress	1	
Ensure the display updates in real-time as new bids are placed.	1	Nithin	In Progress	1	
As a bidder I want to get notification if I won the bid so that I know the auction result #1008	2				1
Implement logic to determine the winning bid.	1	Narayan	In Progress	1	
Set up notifications for bidders when they win the bid.	1	Narayan	In Progress	1	
As a bidder I want to search crops by name so that I can easily find the crops #1009	2				1
Implement the search logic to find and display crops based on the input name.	1	Vignesh	In Progress	1	
Ensure the search is efficient and responsive.	1	Jeevaanth	In Progress	1	
As an admin I want to view and approve crop listing so that the bidding will be completed #1010	4				1
Implement a component to show pending crop listings.	2	Nithin	Not Started	1	
Add functionality for suspension or rejection features.	2	Nithin	Not Started	1	
As an admin I want to view bidder/seller details so that I can know about the users #1011	3				1
Implement a table or list view to display user information (e.g., name, contact details, activity).	2	Bhargava	Not Started	1	
Ensure the page is responsive and user-friendly.	1	Bhargava	Not Started	1	

	User Story	Acceptance Criteria
Post a crop for auction	As a seller i want to post the crop The bidders can bid my products and Buy them	seller can fill a form with crop name,base price, image.
	As a seller, I want to view the list of my crops and their status so that I can track their status.	Seller can see all listed crops. Status of each crop is displayed.
Real-time bids based on crops	As a seller, I want to view real-time bids based on crops so that I know the current highest bid for the crop.	Real-time bid information is displayed
Delete/Update crop details before bidding	As a admin ,I want to delete or update crop details before bidding so that I can fix mistakes and make updates.	admin can edit crop details. Admin can delete crop listing. Changes are reflected immediately.
Search by name	As a seller, I want to filter the crops by name so that it is easy to view the required crops.	Seller can search crops by name. Filtered results are displayed.
View list of available crops for auction	As a bidder, I want to view the list of available crops for auction so that I can buy the required crops.	Bidder can see all available crops. Crop details are displayed.
Place bid on a crop	As a bidder, I want to place a bid on a crop so that I can participate in the auction.	Bidder can enter bid amount,product name,buyer name. Bid is recorded and displayed.
Search crops by name	As a bidder, I want to search crops by name so that I can easily find the crops.	Bidder can search crops by name. Filtered results are displayed.
View and approve crop listing	As an admin, I want to view and approve crop listing so that the bidding can be completed.	Admin can see all crop listings. Approved listings are visible to bidders.
Notification if I won the bid	As a bidder, I want to get a notification if I won the bid so that I know the auction result	Bidder receives notification upon winning. Notification includes bid details.
