

Project Title: Online Job Portal
Employee Name: Nisanth Saravanan
Employee ID: 12576

Description:

This platform connects job seekers with employers, streamlining the recruitment process. It features a comprehensive database of job listings, allowing job seekers to search for relevant opportunities based on keywords, location, and industry. Job seekers can create profiles, upload resumes, and apply for jobs online. Employers can post job openings, manage applications, and communicate with candidates. The system includes tools for resume parsing, candidate screening, and interview scheduling. It also provides analytics on job postings and application trends, enabling employers to optimize their recruitment strategies.

Required Modules:

1. Admin Module.
2. Employer Module.
3. Job Seeker Module.
4. Non-Registered User Module.

Project Title: Online Job Portal	
1. What?	2. How?
1. What are the modules required? Ans: 1. Admin Module. 2. Employer Module. 3. Job Seeker Module. 4. Non-Registered User Module. 2. What are the functionalities of Admin Module? Ans: Admin Module: 1. Admin can view details of Employers. 2. Admin can view details of the Job Seekers. 3. Admin can edit user permissions. 4. Admin can login to their Dashboard. 5. Admin can change their password. 6. Admin can view and Answer with User Queries. 7. Admin can edit About Us page. 3. What are the functionalities of Employer Module? Ans: Employer Module: 1. Employer can login to their Dashboard. 2. Employer can edit their personal information. 3. Employer can create and edit job opening. 4. Employer can view applicant's resume. 5. Employer can send interview schedule details. 6. Employer can change their password. 7. Employer can generate application trend analytics. 4. What are the functionalities of Job Seeker Module? Ans: Job Seeker Module:	1) Admin: a) Admin can View details of Employers: Method 1: The details can be displayed as individual profiles with all details. Method 2: The details can be formatted as a list with Employer ID. Method 3: The details can be shown cards, with minimal details. b) Admin can view details of the Job Seekers. Method 1: The details can be displayed as individual profiles with all details. Method 2: The details can be formatted as a list with Job Seeker ID. Method 3: The details can be shown cards, with minimal details. c) Admin can edit user permissions. Method 1: The user permissions can be edited in user profile. Method 2: The user permissions can be edited using a dedicated wizard. Method 3: The user permissions can be edited in a dedicated panel. d) Admin can login to their Dashboard: Method 1: Admin can login using mail-id and password. Method 2: Admin can login using their social media accounts. Method 3: Admin can login using their phone number. e) Admin can change their password. Method 1: The password can be reset using a reset link sent to mail. Method 2: The password can be reset in their profile.

1. Job Seeker can login to their Dashboard.
2. Job Seeker can edit their personal information.
3. Job Seeker can change their password.
4. Job Seeker can upload their resume.
5. Job Seeker can browse for a job opening.
6. Job Seeker can view openings.
7. Job Seeker can generate job-posting based analytics.

5. What are the functionalities of Non-Registered User Module?

Ans: Non-Registered User Module:

1. Non-Registered User can view openings.
2. Non-Registered User can browse for job opening.
3. Non-Registered User can register into a Dashboard.

Method 3: The password can be reset using phone number.

f) Admin can view and Answer with User Queries.

Method 1: The queries can be shown as cards.

Method 2: The queries can be formatted into a list.

Method 3: The queries can have a dedicated window.

g) Admin can edit About Us page.

Method 1: The edit can be made in React code.

Method 2: The edit can be made in HTML/CSS.

Method 3: The edit can be done in a dedicated panel.

2) Employer:

a) Employer can login to their Dashboard:

Method 1: Employer can login using mail-id and password.

Method 2: Employer can login using their social media accounts.

Method 3: Employer can login using their phone number.

b) Employer can edit their personal information.

Method 1: The details can be edited in their profile as a simple form.

Method 2: The details can be edited in a pop-up window.

Method 3: The details can be edited in a modular form.

c) Employer can create and edit job opening.

Method 1: The openings can be made using a simple template-like form.

Method 2: The openings can be made with a dedicated wizard.

Method 3: The openings can be made with a modular form.

d) Employer can view applicant's resume.

Method 1: Resume can be viewed as cards.

Method 2: Resume can be viewed in a dedicated window.

Method 3: Resume can be viewed as a pop up preview.

e) Employer can send interview schedule details.

Method 1: The schedule can be sent via mail id.

Method 2: The details can be sent via phone number.

Method 3: The schedule can be sent via in-application notification.

f) Employer can change their password.

Method 1: The password can be reset using a reset link sent to mail.

Method 2: The password can be reset in their profile.

Method 3: The password can be reset using

phone number.

g) Employer can generate application trend analytics.

Method 1: The analytics can be in a downloadable and printable format.

Method 2: The analytics can be viewed in a dedicated window.

Method 3: The results of analytics can be seen as cards or simple list.

3) Job Seeker:

a) Job Seeker can login to their Dashboard.

Method 1: Job Seeker can login using mail-id and password.

Method 2: Job Seeker can login using their social media accounts.

Method 3: Job Seeker can login using their phone number.

b) Job Seeker can edit their personal information.

Method 1: The details can be edited in their profile as a simple template-like form.

Method 2: The details can be edited in a pop-up window.

Method 3: The details can be edited in a modular form.

c) Job Seeker can change their password.

Method 1: The password can be reset using a reset link sent to mail.

Method 2: The password can be reset in their profile.

Method 3: The password can be reset using phone number.

d) Job Seeker can upload their resume.

Method 1: Resume can be uploaded in a dedicated window.

Method 2: Resume can be uploaded via a pop-up box.

Method 3: Resume can be uploaded as a link.

e) Job Seeker can browse for a job opening.

Method 1: Searching can be done using filters and categories.

Method 2: Searching can be done using multiple details such as role, location etc..

Method 3: Searching can be done using keywords.

f) Job Seeker can view openings.

Method 1: The openings can be viewed as a detailed list.

Method 2: The openings can be viewed as cards.

Method 3: The openings can be viewed as simple previews.

g) Job Seeker can generate job-posting based analytics.

Method 1: The analytics can be in a downloadable and printable format.

Method 2: The analytics can be viewed in a dedicated window.

	Method 3: The results of analytics can be seen as cards or simple list. 4) Non-Registered User: a) Non-Registered User can view openings. Method 1: The openings can be viewed as a detailed list. Method 2: The openings can be viewed as cards. Method 3: The openings can be viewed as simple pop-up previews. b) Non-Registered can browse for a job opening. Method 1: Searching can be done using filters and categories. Method 2: Searching can be done using multiple details such as role, location etc.. Method 3: Searching can be done using keywords. c) Non-Registered User can register into a Dashboard. Method 1: They can register via a simple form. Method 2: They can register via a dedicated wizard. Method 3: They can register via their social media accounts.
1) Admin: a) Admin can View details of Employers: Method 2: The details can be formatted as a list with Employer ID. - Allows for easier access and searching upon request on the basis of the Employer ID. b) Admin can view details of the Job Seekers. Method 2: The details can be formatted as a list with Job Seeker ID. - Allows for easier access and searching upon request on the basis of the Job Seeker ID. c) Admin can edit user permissions. Method 3: The user permissions can be edited in a dedicated panel. - Allows for a free-flowing UI dedicated for permission monitoring and management. d) Admin can login to their Dashboard: Method 1: Admin can login using mail-id and password. - Provides a comprehensive coverage to all concerns of security and availability during login. e) Admin can change their password. Method 1: The password can be reset using a reset link sent to mail. - Provides a comprehensive coverage to all concerns of security and availability for a reset request.	1) Admin: a) Admin can View details of Employers: - There is not really a concrete need for the admin to view a detailed profile of every Employer as a dedicated profile, and using a cards-like view can not aid in functionality. b) Admin can view details of the Job Seekers. -There is not really a concrete need for the admin to view a detailed profile of every Job Seeker as a dedicated profile, and using a cards-like view can not aid in functionality. c) Admin can edit user permissions. - Having to navigate to a user profile is hectic process if number of users to manage is large, and a dedicated wizard-like structure decreases the efficiency of an admin. d) Admin can login to their Dashboard: - Having to use social media account for an administrative profile, defeats the purpose of an admin credential, and the availability of phone number is unreliable. e) Admin can change their password. - Availability of the phone number and access to the profile is questionable and are not reliable options for a password reset.

f) Admin can view and Answer with User Quieries.

Method 3: The quieries can have a dedicated window.

- Allows for a mess-free UI to view and reply to FAQs.

g) Admin can edit About Us page.

Method 1: The edit can be made in React code.

- This allows for a more flexible editing mechanism and allows admin to add new elements, if needed.

2) Employer:

a) Employer can login to their Dashboard:

Method 1: Employer can login using mail-id and password.

- Provides a comprehensive coverage to all concerns of security and availability during login.

b) Employer can edit their personal information.

Method 1: The details can be edited in their profile as a simple form.

- A simple, yet efficient way to update basic information of a profile.

c) Employer can create and edit job opening.

Method 3: The openings can be made with a modular form.

- Allows additional fields to be added upon requirement.

d) Employer can view applicant's resume.

Method 2: Resume can be viewed in a dedicated window.

- Allows to have a detailed view of all the applicant's resume individually, and proceed for screening.

e) Employer can send interview schedule details.

Method 1: The schedule can be sent via mail id.

- Provides a comprehensive coverage to all concerns of security and availability for an interview session.

f) Employer can change their password.

Method 1: The password can be reset using a reset link sent to mail.

- Provides a comprehensive coverage to all concerns of security and availability for a reset request.

g) Employer can generate application trend analytics.

Method 1: The analytics can be in a downloadable and printable format.

- Allows the user to share the report to necessary stakeholders and store it locally as well.

f) Admin can view and Answer with User Quieries.

- Formatting the questions into a list doesn't help in the "answering" part, and the card-like view is not suitable for a Q&A forum.

g) Admin can edit About Us page.

- HTML/CSS editing lacks flexibility and can not accommodate new elements without changing the existing, and a dedicated pannel is inefficient.

2) Employer:

a) Employer can login to their Dashboard:

- Having to use social media account for an administrative profile, defeats the purpose of an admin credential, and the availability of phone number is unreliable.

b) Employer can edit their personal information.

- A pop-up window wont contribute to a smooth UX, and a modular form is not required for the details of an Employer as there will not be any need of adding fields.

c) Employer can create and edit job opening.

- A template- like form may not accommodate additional details, and a step-by-step guiding wizard is inefficient.

d) Employer can view applicant's resume.

- Card-like view and a pop up preview system can not contribute to the screening process and the information on the resume might get abstracted.

e) Employer can send interview schedule details.

- Availability of phone number, and relying only on in-app notification system are rather questionable approahes and can not guarentee the delivery of the schedule.

f) Employer can change their password.

- Availability of the phone number and access to the profile is questionable and are not reliable options for a password reset.

g) Employer can generate application trend analytics.

- A simple list or card view can abstract results, and a dedicated window does not allow for flexible storage and ahring options.

3) Job Seeker:

a) Job Seker can login to their Dashboard.

- Having to use social media account for an administrative profile, defeats the purpose of an admin credential, and the availability of phone

3) Job Seeker:

a) Job Seeker can login to their Dashboard.

Method 1: Job Seeker can login using mail-id and password.

- Provides a comprehensive coverage to all concerns of security and availability during login.

b) Job Seeker can edit their personal information.

Method 3: The details can be edited in a modular form.

- Allows additional fields to be added upon requirement.

c) Job Seeker can change their password.

Method 1: The password can be reset using a reset link sent to mail.

- Provides a comprehensive coverage to all concerns of security and availability for a reset request.

d) Job Seeker can upload their resume.

Method 2: Resume can be uploaded via a pop-up box.

- A simple pop-up box to drop the pre-formatted resume can prove to be an efficient choice.

e) Job Seeker can browse for a job opening.

Method 2: Searching can be done using multiple details such as role, location etc..

- Greatly increases the accuracy of the results due to number of specific details given as input.

f) Job Seeker can view openings.

Method 1: The openings can be viewed as a detailed list.

- Allows the user to view detailed information of the job posting with no abstraction.

g) Job Seeker can generate job-posting based analytics.

Method 1: The analytics can be in a downloadable and printable format.

- Allows the user to share the report freely and store it locally as well.

4) Non-Registered User:

a) Non-Registered User can view openings.

Method 2: The openings can be viewed as cards.

- Allows for appropriate levels of abstractions, while still giving necessary information.

b) Non-Registered can browse for a job opening.

Method 2: Searching can be done using multiple details such as role, location etc..

- Greatly increases the accuracy of the results due to number of specific details given as input.

number is unreliable.

b) Job Seeker can edit their personal information.

- A template-like form may not accommodate additional details, and a simple pop-up is inefficient and may not be able to capture all necessary elements.

c) Job Seeker can change their password.

- Availability of the phone number and access to the profile is questionable and are not reliable options for a password reset.

d) Job Seeker can upload their resume.

- Dedicated window increases the number of steps, and uploading as a link requires open access to wherever the resume is being stored, which is inefficient.

e) Job Seeker can browse for a job opening.

- The filters and categories have limited accuracy and can not pinpoint to definite results, and the same is the case while using keywords only.

f) Job Seeker can view openings.

- Card-like and pop up previews do not showcase the entire job posting and is an ineffective way to view an opening.

g) Job Seeker can generate job-posting based analytics.

- A simple list or card view can abstract results, and a dedicated window does not allow for flexible storage and sharing options.

4) Non-Registered User:

a) Non-Registered User can view openings.

- The simple pop-up previews can become messy if too many are open, and a detailed list for a non-registered user is unnecessary.

b) Non-Registered can browse for a job opening.

- The filters and categories have limited accuracy and can not pinpoint to definite results, and the same is the case while using keywords only.

c) Non-Registered User can register into a Dashboard.

- A simple form can miss out on necessary information or can prove to be too basic for a job portal registration, and using social media account as a primary login can raise security concerns for the user.

c) Non-Registered User can register into a Dashboard.

Method 2: They can register via a dedicated wizard.

- Allows us to get necessary information in a detailed and step-by-step, guided manner.

3. Why?

4. Why Not?
