

Name: Nuttrenai V

Employee Number: 12565

Tasks: : Use case 1->

Problem Statement: Create the following web pages using HTML , CSS, Bootstrap and Perform validations using JavaScript and jQuery as per the instructions given.

1. The Use case should have a Login page Page.
2. The Use case should have a registration page.

3. Login and registration page should implement HTML5, CSS, Bootstrap support.
4. Allow user to register and store information using setCookie
5. Allow user to Login using getCookie.
6. This is the registration page validation must be implemented using external java script
 - Name: Is not empty and contains only letters and (optionally) spaces.
 - Age: Is not empty, is a number, and falls within a realistic range (for example, 0–120).
 - Email: Is not empty and matches a standard email format using a regular expression.
 - Mobile: Is not empty, is numeric, and matches the expected length/format (e.g., a 10-digit number).
 - Address: Is not empty.
 - Date of Birth (DOB): Is not empty and represents a valid date (you might also wish to compare it with age).
 - Password: Is not empty and meets a minimum length requirement (and possibly complexity rules).
 - Confirm Password: Must match the password exactly.
 - Occupation: Is not empty (or, if using a select box, that an option is chosen).
 - Income: Is not empty, is numeric, and is non-negative.
 - Gender: Has been selected (for example, via radio buttons).
 - ID Proof: Is not empty (this could be a text field or a file upload input; here we treat it as text).
7. Add more validations as per the need of your use cases external java script

8. Display Table data using action buttons as follows.
